Arkadiusz Niedzielski 283517

Best Scikit-learn Random Forest Parameters:

n_estimators: 150

Best Validation AUC (Scikit-learn): 0.95

Scikit-learn Random Forest (Validation):

Validation Accuracy: 0.88

Validation Precision: 0.88

Validation Recall: 0.88

Validation AUC: 0.95

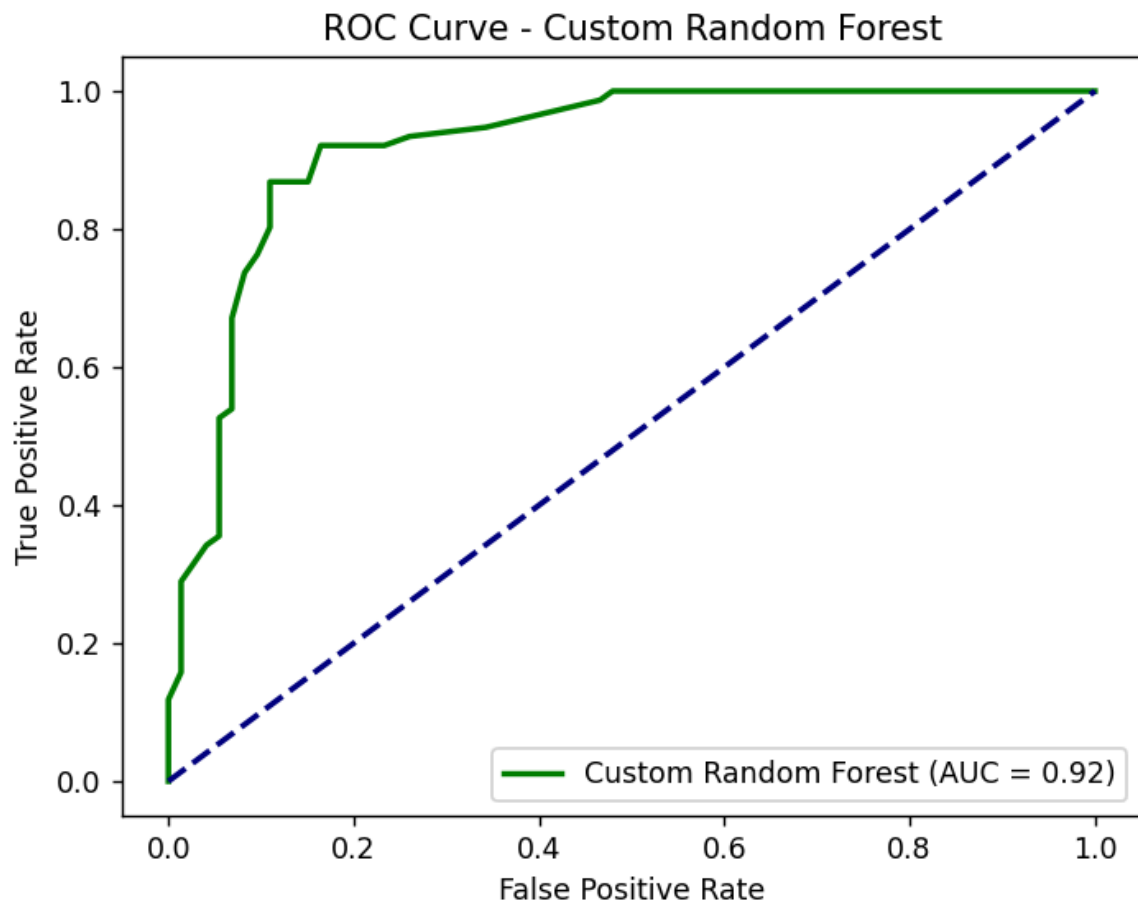

Scikit-learn Random Forest (Test):

Test Accuracy: 0.85

Test Precision: 0.85

Test Recall: 0.87

Test AUC: 0.93

Best Custom Random Forest Parameters:

n_estimators: 100

Best Validation AUC (Custom Random Forest): 0.95

Custom Random Forest (Validation):

Validation Accuracy: 0.58

Validation Precision: 1.00

Validation Recall: 0.17

Validation AUC: 0.95

Custom Random Forest (Test):

Test Accuracy: 0.58

Test Precision: 0.93

Test Recall: 0.18

Test AUC: 0.92

4. Należy maksymalizować Recall, bo celem jest wykrycie jak największej liczby przypadków choroby, nawet kosztem większej liczby fałszywych alarmów.
